**Viking Unveils Library of 3D Product Drawings  
and Instructional Repair Videos**

**Hastings, Michigan, USA** – Viking Corporation announced today the availability of two exciting new resources to assist those involved in the design, installation, and service of their products.

First, the company has launched an extensive library of 3D product drawings. These files, which are compatible with Autodesk's Revit® 3D CAD software, allow a designer to easily integrate Viking products into their Revit® 3D designs. The new 3D drawings can be accessed through either the "Products" or "Technical Data" section of the Viking web site ([www.vikinggroupinc.com](http://www.vikinggroupinc.com)). After finding a specific Viking product, the new drawings will appear in a box titled "Revit® Files" on the right-hand side of the product window.

Second, Viking has introduced a series of "Product Repair Videos." These new videos include detailed, precise instructions for disassembling, repairing, and then reassembling Viking valves and devices. Whether used as a training aid or a field resource, these videos provide valuable information on the proper inspection and maintenance of Viking products.

The product repair videos are available in the "Resources" section of the Viking web site under the heading, "Product Repair Movies." The video files can be downloaded, saved, or viewed online. Additionally, DVD-ROMs containing the complete library of product repair videos will be available through the Viking literature request web site in the near future ([www.vikingliterature.com](http://www.vikingliterature.com)).
