TECHNICAL DATA

DELUGE FOAM/WATER SYSTEM SUPPLIED BY BLADDER TANK

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

1. DESCRIPTION

A Deluge Foam/Water System Supplied by Bladder Tank is a standard deluge system capable of discharging a foam/water solution automatically through open sprinklers, spray nozzles, monitor nozzles, and other discharge devices. A Deluge Foam/Water System Supplied by Bladder Tank with a hydraulically actuated Viking Halar® coated concentrate control deluge valve consists of a standard deluge system using a Viking deluge valve (C) complete with full standard trim and detection and releasing devices, a concentrate controller-proportioning device (B) with appropriately sized orifice, a hydraulically actuated Viking Halar® coated concentrate control deluge valve (D) on foam concentrate line, a foam concentrate bladder tank, and trim and foam agent.

2. LISTINGS AND APPROVALS

No formal approval as a system. Main component approvals listed below.

· Deluge Valve and Trim

UL Listed - Guide VLFT

FM - Automatic Water Control Valves

• Concentrate Controller (Proportioner)

UL Listed - Guide GFGV

FM Approved - Low Expansion Foam Systems

Halar[®] Coated Concentrate Control Valve (CCV)

UL Listed - Guide VLFT

FM Approved - Automatic Water Control Valve as standard deluge valve. No formal approval available for coating.

· Foam Concentrate

UL Listed - Guide GFGV

FM Approved - Low Expansion Foam Systems

· Viking Bladder Tank ASME Sect. VIII Certified

UL Listed - Guide GHXV

FM Approved - Low Expansion Foam Systems

3. TECHNICAL DATA

Specifications:

Refer to individual component technical data page.

Material Standards:

Refer to individual component technical data page.

Ordering Information:

Refer to Tables 1 through 3.

4. INSTALLATION

A. Discharge Devices

- · Open standard spray sprinklers
- · Foam/water sprinklers
- · Non-aspirating spray nozzles
- Manual and oscillating monitors
- Foam chambers
- · Sub-surface injection (forcing foam maker)
- · Hose reels and hand lines
- · ... and other dispensing devices

B. General Instructions And Warnings

- 1. Refer to the Warnings and General Notes on pages 2a-d in the "Foam Design" section of the Viking Foam Systems Engineering and Design Data book.
- 2. Refer to specific technical data sheets, acceptable installation standards, codes, and Authority Having Jurisdiction for additional installation, operation, and maintenance instructions.

Viking Technical Data may be found on The Viking Corporation's Web site at http://www.vikinggroupinc.com.

The Web site may include a more recent edition of this Technical Data Page.

Foam 20b December 6, 2010

TECHNICAL DATA

DELUGE FOAM/WATER SYSTEM SUPPLIED BY BLADDER TANK

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

- 3. Inspections It is imperative that the system is inspected and tested on a regular basis. See Section 6 Inspections, Tests ,and Maintenance.
- 4. **WARNING** Any system maintenance or testing that involves placing a control valve or detection system out of service may eliminate the fire protection of that system. Prior to proceeding, notify all Authorities Having Jurisdiction. Consideration should be given to employment of a fire patrol in the affected area.
- 5. The valve, trim, and assembly must be installed in an area not subject to freezing temperatures or physical damage.

C. Design and Installation

WARNING: Locate all portions of the foam/water system subject to freezing, in a heated area.

- 1. Refer to the Special Notes section on page 20e and Warnings and General Notes on pages 2a-d in the "Foam Design" section of the Viking foam data book.
- 2. Install the deluge valve (C) and trim in accordance with the Viking Engineering and Design Data book.
- 3. Install the proportioning device (B), concentrate controller with integral orifice, in riser piping.
- 4. Install foam solution test valve (17) and system isolation valve (18). These valves are used to conduct foam/water solution tests.
- 5. Install hydraulically actuated Viking Halar[®] coated concentrate control deluge valve (D) and associated trim as indicated on Figure 1, and trim charts or technical data pages.
- 6. Install bladder tank (A) in accordance with the manufacturer's instructions with connections as shown on Figure 1, and herein described.
 - a. Locate the tank as close as practical to the system riser. (See Special Note B on Page 20e.)
 - b. Allow enough room around the tank to service the bladder.
 - c. Allow access to the tank for filling from barrels of foam concentrate.
 - d. Install the pipe from the riser to the tank as indicated on Figure 1. Install the piping from the tank (A) to the concentrate controller (B) as straight as possible.
 - e. All valves and devices should be located for easy access for operation and maintenance.

7. Pressurize System

- a. Verify that water supply valve (10) is closed, then place bladder tank (A) in service by following manufacturer's instruc-
- b. Close tank water supply control valve (11), then place the deluge valve (C) in service. (See installation instructions on Viking Technical Data Sheet.)
- c. Set release and detection system according to installation instructions for type of release used (Pneumatic, Hydraulic, or Electric).
- d. Prime both Viking deluge valves (C & D) by opening the priming valve on the deluge valve (C) trim. Bleed off any air pressure trapped in the priming line (13) to the Viking Halar® coated concentrate control deluge valve (D) by opening the 3-way pressure gauge valve (14). Once air pressure has been relieved, close the 3-way valve and plug outlet. Re-open 3-way valve to maintain pressure on gauge (14).
- e. When pressure in deluge valve (C) priming chamber equals system water supply pressure, turn on system water supply by opening main drain on deluge valve (C) and partially opening water supply valve (10). When water appears at main drain, slowly close main drain. Before fully opening water supply control valve (10), place alarm test shut-off valve in alarm position, and open tank water supply control valve (11) and system isolation valve (18). With system fully set, fully open and secure water supply control valve (10).
- f. Verify normal valve positions and secure in proper position.
- g. Check for and repair any leaks.

D. Removing The System From Service And Returning The System To Service

WARNING: See Warning in Section 6 - Inspections, Tests, and Maintenance

- 1. For system and riser piping maintenance and service:
 - a. Close water supply control valve (10).
 - b. Close concentrate shut-off valve (9***) and tank water supply valve (11).
 - c. Open all drain valves on deluge system.
 - d. Leave system isolation valve (18) open.
 - e. Refer to instructions for removing the deluge valve (C) from service in the Viking Engineering and Design Data book.
 - f. Perform maintenance and service on system and riser piping.
 - g. Open concentrate shut-off valve (9***).
 - h. With tank water supply valve (11) closed, place the deluge valve (C) in service as follows (see installation instructions in the *Viking Engineering and Design Data* book).

TECHNICAL DATA

DELUGE FOAM/WATER SYSTEM SUPPLIED BY BLADDER TANK

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058
Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

- Set release and detection system according to installation instructions for type of release used (Pneumatic, Hydraulic, or Electric).
- j. Prime both Viking deluge valves (C & D) by opening the priming valve on the deluge valve (C) trim. Bleed off any air pressure trapped in the priming line to the Viking Halar® coated concentrate control deluge valve by opening the 3-way pressure gauge valve (14). Once air pressure has been relieved, close the 3-way valve and plug the outlet. Re-open 3-way valve to maintain pressure on gauge (14).
- k. When pressure in deluge valve (C & D) priming chambers equal system water supply pressure, turn on system water supply by opening main drain on deluge valve (C), and partially opening water supply valve (10). When water appears at main drain, slowly close main drain. Before fully opening water supply valve (10), place alarm test shut-off valve in alarm position. Verify system isolation valve (18) is open and open tank water supply valve (11). With system fully set, fully open and secure water supply control valve (10).
- I. Verify normal valve positions and secure in proper position.
- m. Check for and repair any leaks.
- 2. For tank maintenance and service while leaving deluge system in service:
 - a. Close concentrate shut-off valve (9***) and tank water supply (11).
 - b. Follow tank manufacturer's procedures for removing from service, and perform maintenance.
 - c. To return to service, close water supply control valve (10), and verify Halar[®] coated concentrate control valve (D) is closed. Follow tank manufacturer's procedure.
 - d. Verify that concentrate shut-off valve (9***), tank water supply (11) ,and system isolation valve (18) are open. Verify deluge valve (C) is primed, then open water supply control valve (10).
 - e. Verify normal valve positions and secure in proper position.
 - f. Check for an repair any leaks.
- 3. For total system maintenance and service:
 - a. Close water supply control valve (10), concentrate control shut-off valve (9***), and tank water supply valve (11).
 - b. Open all drain valves on deluge system.
 - c. Leave system isolation valve (18) open.
 - d. Refer to instructions for removing the deluge valve (C) from service. See appropriate Viking Technical Data Sheet.
 - e. Perform maintenance and service as required.
 - f. Refer to the Special Notes on page 20e and the Warnings and General Notes in the "Foam Design" section of the Viking foam data book.
 - g. All valves should be closed, including concentrate control shut-off valve (9***), water supply control valve (10), tank water supply valve (11), foam solution test valve (17), system isolation valve (18), and Halar[®] coated foam concentrate control valve (D), and alarm test shut-off valve on deluge valve (C) trim.
 - h. Verify that water supply valve (10) is closed, then place bladder tank (A) in service by following manufacturer's instructions.
 - i. Place the deluge valve (C) in service. (See installation instructions on Viking Technical Data Sheet.)
 - Set release and detection system according to installation instructions for type of release used (Pneumatic, Hydraulic, or Electric).
 - k. Prime both Viking deluge valves (C & D) by opening the priming valve on the deluge valve (C) trim. Bleed off any air pressure trapped in the priming line (13) to the Viking Halar® coated concentrate control deluge valve by opening the 3-way pressure gauge valve (14). Once air pressure has been relieved, close the 3-way valve and plug outlet. Re-open 3-way valve to maintain pressure on gauge (14).
 - I. When pressure in deluge valve (C & D) priming chambers equal system water supply pressure, turn on system water supply by opening main drain on deluge valve (C), and partially opening water supply valve (10). When water appears at main drain, slowly close main drain. Before fully opening water supply control valve (10), place alarm test shut-off valve in alarm position, and open tank water supply control valve (11) and system isolation valve (18). With system set, fully open and secure water supply control valve (10).
 - m. Verify normal valve positions and secure in proper position.
 - n. Check for and repair any leaks.

E. Troubleshooting

- For operating and maintenance instructions pertaining to Viking manufactured equipment, refer to the appropriate Viking Technical Data Sheet.
- 2. For operating and maintenance instructions pertaining to foam equipment manufactured for Viking, refer to the appropriate section of the Viking foam data book.
- 3. For operation and maintenance instructions for all other equipment, refer to appropriate equipment data.

DELUGE FOAM/WATER SYSTEM SUPPLIED BY BLADDER TANK

The Viking Corporation, 210 N Industrial Park Drive, Hastings MI 49058

Telephone: 269-945-9501 Technical Services: 877-384-5464 Fax: 269-818-1680 Email: techsvcs@vikingcorp.com

F. Emergency Instructions

- 1. During and after a fire:
 - a. Make sure the fire is OUT! Make a complete inspection of all areas covered by this system, including areas not involved in the fire. Place a fire watch in the entire area until the system is back in service.
 - b. Close the system water supply control valve (10). Post a person at the valve ready to turn it back on, should the fire re-kindle. Close the tank water supply valve (11).
 - c. Open the flow test angle valve, system drain valve and all auxillary drain valves. Close drain valves once the system has completely drained.
 - d. Replace any fused sprinklers in the pilot line (if so equipped), with the same type and temperature rating as were removed. Check all releases and/or detectors in the fire area for damage.
 - e. Isolate the bladder tank (A) by closing the concentrate control shut-off valve (9***), and verify that the tank water supply control valve (11) is closed.
 - f. Check the level of foam concentrate and refill the foam concentrate bladder tank (A) by following tank manufacturer's instructions. Always replace the foam concentrate with the same brand and type as that being used currently. Note: Never intermix different types or brands of foam concentrate, as this could cause them to gel or solidify, and render the concentrate useless.
 - g. Return the complete system to service by following the procedure listed in Section 4-D-1, Steps i through n.
 - h. Perform quarterly test.
 - i. Fire can damage piping and supports, so call your Viking representative for assistance in obtaining a complete inspection and additional replacement sprinklers. For additional details, see technical data sheets for specific device.

NOTE: If replacement foam concentrate is not immediately available, activate the deluge system portion of the foam/water system until the replacement concentrate arrives.

- 2. For emergency shut down of the complete system:
 - a. Close main water supply valve (10).
 - b. Close concentrate control shut-off valve (9***) to eliminate the flowing of the foam concentrate to the hydraulically actuated Viking Halar® coated concentrate control deluge valve (D) and the concentrate controller (B).
 - c. Close tank water supply control valve (11) to reduce the pressure on the bladder tank (A).
 - d. Open main drain.
 - e. Completely drain system.
 - f. Repair the damaged portion of the discharge system, or perform emergency maintenance as required.
 - g. Return the riser and foam system to service by following the procedure listed in Section 4-D-1, Steps i through n.
- 3. If the foam concentrate pipe system is damaged:
 - a. Close the concentrate control shut-off valve (9***) to eliminate the flowing of the foam concentrate to the hydraulically actuated Viking Halar[®] coated concentrate control deluge valve (D) and the concentrate controller (B).
 - b. Close the tank water supply control valve (11) to reduce the pressure on the bladder tank (A).
 - c. Verify that the Viking Halar® coated concentrate control deluge valve (D) is closed by observing water pressure gauge (14). If the water pressure gauge reads the same or higher than the system water pressure gauge located on the Viking deluge valve (C), the Viking Halar® coated concentrate control deluge valve (D) is closed.
 - d. Repair the damaged portion of the foam concentrate piping system.
 - e. Return the foam concentrate system to service, by following the procedure as described above in Section 4-D-2, Steps c through f.

NOTE: If there are no damaged sections of the distribution system, the deluge portion of the sprinkler system may be kept in service for protection, while repairs to the foam concentrate system are performed.

5. OPERATION

Actuation of the release line (pneumatic, hydraulic or electric) relieves the pressure in the priming chamber of both the Viking deluge valve (C) and the Viking Halar® coated concentrate control deluge valve (D). This allows the clapper to open on both valves (C) and (D). The system piping is filled with water, activating connected alarms and pressurizing the bladder tank (A) by the water supply piping (12). System water pressure in the space between the flexible bladder and the inside surface of the steel tank causes the bladder to collapse, forcing the foam concentrate out through the foam concentrate discharge piping (15), Viking Halar® coated concentrate control deluge valve (D), and the metering orifice of the concentrate controller (B), into the venturi, (low pressure) area of the concentrate controller (B). The foam concentrate is proportioned (usually 1% or 3%), with the main water supply, sending foam solution to the sprinklers and foam/water discharge devices downstream.

6. INSPECTION, TESTS, AND MAINTENANCE

NOTICE: The owner is responsible for maintaining the fire protection system and devices in proper operating condition. For minimum maintenance and inspection requirements, refer to recognized standards, such as those produced by NFPA, LPC and VdS, which describe care and maintenance of sprinkler systems. In addition, the "Authority Having Jurisdiction" may have additional maintenance, testing, and inspection requirements that must be followed.

WARNING - Any system maintenance or testing that involves placing a control valve or detection system out of service may eliminate the fire protection of that system. Prior to proceeding, notify all Authorities Having Jurisdiction. Consideration should be given to employment of a fire patrol in the affected area.

Inspections - It is imperative that the system be inspected and tested on a regular basis. The following recommendations are minimum requirements. The frequency of the inspections may vary due to contaminated or corrosive water supplies and corrosive atmospheres. In addition, the alarm devices or other connected equipment may require more frequent inspections. Refer to the technical data, system description, applicable codes and Authority Having Jurisdiction for minimum requirements. Prior to testing the equipment, notify appropriate personnel.

7. AVAILABILITY

The Deluge Foam/Water System Supplied by Bladder Tank is available through a network of domestic and international distributors. See the Viking Corp. web site for closest distributor or contact The Viking Corporation.

8. GUARANTEE

For details of warranty, refer to Viking's current list price schedule or contact Viking directly.

SPECIAL NOTES

- A. Provide a minimum of 5 pipe diameters of straight pipe on the inlet and outlet of the concentrate controller (B) to minimize turbulence inside the concentrate controller.
- B. The combined total equivalent length of pipe, fittings and valves in both the water supply inlet piping (12) and the foam concentrate discharge piping (15), must not exceed 50 equivalent feet (15.2 meters). This will allow both pipes to be the same size as the foam liquid inlet to the concentrate controller. Should the total equivalent length exceed 50 feet (15.2 meters), then refer to the "Proportioning Equipment" section of this data book for the method of calculating these pipe sizes.
- C. The Halar® coated concentrate control deluge valve (D) and swing check valve (16) must be connected adjacent to the concentrate controller using pipe nipples as short as possible.
- D. Figures 1 3 are general schematics of the required piping arrangement. Refer to the appropriate technical data page for specific information regarding the valve, tank, and related trim and devices.
- E. The technical information, statements, and recommendations contained in this manual are based on information and tests that, to the best of our knowledge, we believe to be dependable. It represents general guidelines only, and the accuracy or completeness thereof, are not guaranteed since conditions of handling and usage are outside our control. The purchaser should determine the suitability of the product for its intended use and assumes all risks and liability whatsoever in connection therewith.
- F. The Halar[®] coated concentrate control deluge valve (D) does not require any trim, except for a ½" priming line (13) and water pressure gauge and 3-way valve (14) from the main deluge valve (C) to the priming chamber of valve (D). Plug all the remaining valve trim outlets. Connect Halar[®] coated concentrate control deluge valve (D) priming line (13) to deluge valve (C) as shown on Figure 2. Refer to the "Valves" section of this data book to find the correct trim kit part number for the corresponding size of Halar[®] coated foam concentrate control deluge valve (D) required.
- G. A strainer is not required in the foam concentrate discharge piping (15) of bladder tank systems per NFPA Standards.
