

Combustible Interstitial Space Sprinkler
COIN® VK950 5.6K Quick Response

Eliminate Draft Curtains with Viking's Enhanced VK950 Sprinkler

Now cULus Listed up to 2,000 ft²

Viking has enhanced its cULus Listing for the 5.6 (80) K-factor quick response COIN® sprinkler to protect combustible interstitial spaces. With this enhancement, Viking has doubled the allowable installed area from 1,000 to 2,000 square feet before installation of a draft curtain is required. For many applications, this increased area for the VK950 will be sufficient to eliminate the draft curtains completely.

In addition, the VK950 features a remote area design calculation of 1,000 square feet or six sprinklers, whichever is greater. This often makes the VK950 a drop-in replacement for competitive sprinklers with more stringent draft curtain requirements.

This UL listing enhancement currently applies to open truss construction, with the top and bottom chord members on their face (not on edge). Please refer to Viking's Technical Datasheet for additional details. Or, call Viking's Technical Services team at (877) 384-5464 or email techsvcs@vikingcorp.com. The VK950 sprinklers are in stock and ready to purchase at your local Viking SupplyNet service center.
