

### FM Approved foam-water sprinklers for tough applications

Foam water sprinklers need to be robust in order to handle the challenge. These applications are especially difficult due to the very low operating pressure and expansion ratios recommended. Applying foam through a sprinkler is a very forceful application method requiring foam that can handle direct agitation and partial submersion into the fuel without losing its fire performance and burn back resistance. With these requirements in mind, customers will find that select Viking FM Approved sprinklers work seamlessly with available SFFF concentrates.

*Features and advantages of Viking's foam water sprinklers:*

- A comprehensive range of foam water sprinklers
- Approved for use with available SFFF concentrates
- Approved for various fuel groups (see technical datasheet for details)
- The sprinklers meet the requirements of FM Global data sheet 4-12
- The sprinklers are part of a complete foam system package from one trusted source
