

vDesign

From Design to Delivery

vDesign is Viking's comprehensive suite of design tools revolutionizing fire protection system design, calculation, stock listing and fabrication. Built for seamless integration with Revit® and offering standalone desktop applications, vDesign empowers users to streamline workflows, reduce errors, and accelerate project delivery – from initial design to final installation.

Design fire protection systems effortlessly in Revit® with vDesign. Streamline tasks and includes an extensive product library for seamless integration with Viking's product line.

vCalc simplifies the hydraulic calculation experience and is equipped with a fully-customizable component database, 3D viewer, and bulk-editing capabilities. This tool can be used on a standalone desktop application or within Revit®.

Take control of stocklist creation with vList's interactive Revit® interface. vList's extensive validation eliminates errors and improves list accuracy. vList handles non-Revit® lists by easily inputting hand-drawn lists and service requests into a uniform format.

vInert, available with a standalone desktop application or within Revit®, allows you to quickly design and calculate inert gas systems tailored to protect your specific hazard. Once completed, you will receive a complete bill of materials that you can send in for a quote.
