1. DESCRIPTION

The Viking SUREFIRE® Single Interlock Preaction TRIMPAC® Model D-1 and D-1B used with either a Model E or F Deluge Valve (A.1), a Viking Easy Riser check valve (F.1), a VFR400 Release Control Panel (G.1) and all associated trim piping form a unique operating system. The system piping is normally dry and pneumatically pressurized to supervise the integrity of the piping, fitting and sprinklers and provide the failsafe operation of the system upon loss of the primary and secondary power supplies. Preaction systems are commonly used to help minimize accidental water damage and still provide fast water discharge during a fire emergency.

The Viking SUREFIRE® Single Interlock Preaction TRIMPAC® Model D-1 & D-1B is a factory assembled and tested unit. The enclosure incorporates access doors for the emergency release (B.1) and alarm test valve (B.7) and view ports for the prime (B.6) and water supply pressure gauges (B.9). The TRIMPAC® Model D-1 and D-1B eliminates the field assembly of the deluge valve trim and release module piping. The enclosure protects the trim from damage or inadvertent operation. The included stainless steel hoses (or field provided piping) from the deluge valve to the enclosure assembly allows the TRIMPAC® Model D-1 & D-1B to be installed remote from the sprinkler system riser. A valve drain package is required for the deluge valve and is ordered based on the size of the deluge valve. See Figures 14-16 for drain trim charts.

Note: Viking SUREFIRE® Single Interlock Preaction TRIMPAC® D-1 & D-1B is a complete system, and is listed as a unit. As such, it is normally not possible to modify the components of the system or their interrelationship without compromising the listing.

2. LISTINGS AND APPROVALS

- UL listed - VLTR & VLTR7
- FM Approved - Preaction Sprinkler Systems
- NYCDP - MEA 89-92-E, Vol. XXXIII

3. TECHNICAL DATA

Specifications:
- Rated Water Working Pressure: 250 psi (17.2 bar)
- Gauges: 0-300 PSI (20.7 bar)
- Weight: 55 lbs. (24.9 kg.)
- Dimensions: 16-1/8" (409 mm) high x 29-1/8" (748 mm) wide x 8-25/32" (223 mm) deep
- U.S. Patent Numbers: 6,848,513, 7,055,612, & 7,185,711

Material Standards:
- Enclosure: 16 gauge steel, painted red: Epoxy Powder Coat
- Gauges: Brass, 1/4 NPT, Plastic Body
- Solenoid Valves (1 NO, 1 NC): Brass Body ½" (1.27 cm), 24 Volt DC, 250 psi (17.2 bar) NEMA Rated 1, 2, 3, 3S, 4 or 4X, 9 Watt
- PORV: Brass Body, 250 PSI (17.2 bar), ½" NPT inlet, ½" NTP drain, ½" NPT sensing side
- Ball valves: ½" NPT female ends
- Strainer: Brass Body, ½" NPT inlet and outlet, 50 mesh screen
- Restricted orifice: Brass Body, ½" NPT male outlet, 0.0625" orifice
- Spring Loaded Check Valve: Brass Body, ½" NPT female inlet and outlet
- Drain Check Valve: Brass Body, ½" NPT female inlet and outlet, EPDM clapper rubber
- Hoses (4): Flexible braided stainless steel hoses with steel fittings and connectors, PTFE lined
- Drain Hose (1): PVC Hose 60” long with brass hose connector x 1/2” NPT
- Trim Piping: 1/2” Galvanized or 1/2” Brass
- Fittings: 1/2” Galvanized or 1/2” Brass

Ordering Information:
- Part No. - Galvanized 13798D-1
- Part No. - Brass 13798D-1B (Brass available by special order only.)

1. Accessories:
   a. Vertical Mounting Plate Kit - Part No. 11900
   b. Horizontal Mounting Plate Kit - Part No. 11901
   c. Hose Assembly Kit (Includes (4) Stainless Steel Hoses and (1) PVC Drain Hose) - Part No. 12072

Viking Technical Data may be found on The Viking Corporation’s Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.
4. INSTALLATION

TRIMPAC® Model D-1 and D-1B SureFire® Trim Assemblies may be installed with Viking Model E (angle style) or Model F (straight through style) Deluge Valves, sizes 1-1/2", 2", 2-1/2", 3", 4", 6", and 8".

The TRIMPAC® Model D-1 and D-1B and valve must be installed in an area not subject to freezing.

The TRIMPAC® Model D-1 and D-1B must be installed to facilitate drainage.

The TRIMPAC® Model D-1 and D-1B must be installed above the elevation of the drip check valve (C.2).

The TRIMPAC® Model D-1 and D-1B can be installed with the hose package or ¼" non-corrosive metallic piping. The maximum distance the TRIMPAC® Model D-1 and D-1B may be installed away from the deluge valve is 5'-0".

The check valve in the air line must be installed on the riser check valve to facilitate drainage.

The deluge valve equipped with TRIMPAC® must be installed in accordance with Viking Technical data. The required drain package must be installed in accordance with Figures 14-16.

Verify that the Alarm Shut-off Valve (B.10) is open and that all other valves are in their normal operating position.

Fully open and secure the Main Water Supply Control Valve (E.1).

Close Auxiliary Drain (C.1).

Drain (C.1).

When full flow develops from Flow Test Valve (C.4), close the Flow Test Valve. Verify that there is no flow from open Auxiliary Drain (C.1).

Partially open Main Water Supply Control Valve (E.1) (if closed).

Open Flow Test Valve (C.4).

i. Galvanized - 1-1/2" - 11894-1
   ii. Galvanized - 2" - 11894-2
   iii. Galvanized - 2-1/2" & 3" - 11894-3
   iv. Galvanized - 4", 6" & 8" - 11894-4

Brass - 1-1/2" - 11894-5
Brass - 2" - 11894-6
Brass - 2-1/2" & 3" - 11894-7
Brass - 4", 6" & 8" - 11894-8

Verify that the System Main Water Supply Control Valve (E.1) is closed and the Deluge Valve (A.1) is trimmed according to instructions provided in the release control panel Owner’s Manual.

Verify that the VFR-400 Release Control Panel (G.1), Detector Circuits and Detectors have been properly installed and energized according to instructions provided in the release control panel Owner’s Manual.

Verify that the system has been properly drained. (When plunger is depressed on drip check (C.2), no water should flow.) System Drain should be open. Verify that Emergency Release (B.1) is closed. Note: Emergency release (B.1) is closed when the handle is In-Line with the pipe. This allows the door to close when the valve is in the normal position.

Verify that the System Main Water Supply Control Valve (E.1) is closed and the Deluge Valve (A.1) is trimmed according to Figures 3 through 12.

Verify that the system water supply piping is pressurized up to the closed System Main Water Supply Control Valve (E.1) and the priming line is pressurized up to the closed Priming Valve (B.2).

Establish normal condition on the VFR-400 Release Control Panel (G.1).

Establish system air pressure. Make sure supervisory air switch (B.18) is set to proper activation pressure.

Open Priming Valve (B.2).

Open Flow Test Valve (C.4).

i. Partially open Main Water Supply Control Valve (E.1) (if closed).
   j. When full flow develops from Flow Test Valve (C.4), close the Flow Test Valve. Verify that there is no flow from open Auxiliary Drain (C.1).
   k. Close Auxiliary Drain (C.1).
   l. Fully open and secure the Main Water Supply Control Valve (E.1).
   m. Verify that the Alarm Shut-off Valve (B.10) is open and that all other valves are in their normal operating position.
5. OPERATION (Refer to Figures 3 - 12.)

In the SET condition:
System water supply pressure enters the priming chamber of the Deluge Valve (A.1) through the 1/2” (13 mm) priming line which includes a normally open priming valve (B.2), strainer (B.3), restricted orifice (B.4), and check valve (B.5). In the SET condition, water supply pressure is trapped in the priming chamber by check valve (B.5), normally closed Emergency Release Valve (B.11), Pneumatic Actuator (B.12), and normally closed Release Solenoid Valve (B.14). Water Supply pressure in the priming chamber holds the clapper of the Deluge Valve (A.1) on the seat due to the differential design of the valve pressure. The clapper separates the inlet chamber from the outlet chamber, keeping the outlet chamber and system piping dry.

In Fire Conditions:
When the detection system (G.2) operates, the VFR400 Control Panel (G.1) activates the system alarm and energizes normally closed Release Solenoid Valve (B.14) open. Pressure is released from the priming chamber faster than it is supplied through the restricted orifice (B.4). The Deluge Valve (A.1) clapper opens to allow water to flow into the system piping and to alarm devices. Water entering the system piping and increases pressure on the PORV (B.11), which vent the water supplies to the prime chamber. Water will flow from any open sprinklers or nozzles.

To return the system to “Normal” conditions, drain the system piping and replace any sprinklers that may have operated. Replace any detectors which have been damaged. Re-establish system air pressure by following the steps in section 4. INSTALLATION, Step 8, Placing the system in service.

Panel Trouble, Loss of Power Prior to Operation or Pipe Damage Conditions: During Normal Power Supply Conditions, faults or complete loss of power.

During normal power conditions if the system piping and/or the sprinklers are damaged, the low pressure supervisory switch (B.7) will activate a supervisory alarm at the VFR400 Release Control Panel (G.1) and the normally open solenoid valve (B.17) will be powered closed to prevent the deluge valve from opening.

In the event of a fire during a fault on the input circuit wiring, loss of primary AC power or complete loss of all power, the deluge valve will open allowing water flow if the following conditions occur:
   1. The initiating devices (G.2) activate causing the VFR400 Release Control Panel (G.1) to enter an alarm and release condition. The normally closed solenoid valve (B.14) will open allowing water pressure to be relieved from the priming chamber of the deluge valve (A.1). With pressure relieved from the priming chamber, the deluge valve will open and allow water flow. Water will not be discharge into the protected area until a sprinkler head operates.
   2. During a fault condition on the input wiring which caused a trouble alarm on the VFR400 Release Control Panel (G.1) or a complete loss of normal AC power and standby battery backup power the normally open solenoid valve (B.17) is prevented from operating. During this condition activation of a sprinkler head will allow a pneumatic release of the deluge valve (A.1). Water pressure will be relieved from the priming chamber, the deluge valve (A.1) will open and allow water to flow.

Loss of Power During Operation:
If all power fails while the system is flowing water, the normally open Release Solenoid valve (B.17) will open and the normally closed Release Solenoid valve (B.14) will remain closed. The PORV (B.11) is already pressurized open to prevent pressure in the chamber from building up. Water from main supply will continue entering the system, and through any open sprinkler(s).

Manual Operation:
Any time the handle inside Emergency Release (B.1) is pulled, pressure is released from the priming chamber faster than it can be replaced through the priming line; the Deluge Valve (A.1) will open. Water will fill the system piping, activating any connected alarms, but will not discharge from any closed sprinklers attached to the system until a sprinkler has operated, as in a fire. All alarms will operate normally. After operating the Emergency Release (B.1), DO NOT close the Emergency Release until the system is ready to be reset.

6. INSPECTIONS, TESTS, AND MAINTENANCE

It is imperative that the system be inspected and tested on a regular basis. The frequency of the inspections may vary due to contaminated water supplies, corrosive water supplies, or corrosive atmospheres. Also, the alarm devices, detection systems, or other connected trim may require a more frequent schedule. For minimum maintenance and inspection requirements, refer to NFPA 25. In addition, the Authority Having Jurisdiction may have additional maintenance, testing, and inspection requirements that must be followed. Refer to the specific Viking deluge valve data page for periodic testing.

Maintenance:
TRIMPAC® Model D-1 and D-1B should be inspected, tested, and maintained in accordance with the latest edition of NFPA 25, The Standard for Inspection, Testing, and Maintenance of water based fire protection systems, and in accordance with the Authority Having Jurisdiction.
WARNING

Any system maintenance that involves placing a control valve or detection system out of service will impair the fire protection capabilities of that system. Prior to proceeding, appropriate impairment procedures per NFPA 25 shall be followed with the notification of all Authorities Having Jurisdiction. Consideration should be given to employment of a fire patrol in the affected areas.

Failure to follow these instructions could cause improper system operation, resulting in serious personal injury and/or property damage.

After Each Operation:

1. Sprinkler systems that have been subjected to a fire must be returned to service as soon as possible. The entire system must be inspected for damage, and repaired or replaced as necessary.

2. Deluge valves and TRIMPAC® Models D-1 and D-1B that have been subjected to brackish water, salt water, foam, foam/water solution, or any other corrosive water supply should be flushed with good quality fresh water before being returned to service. Refer to specific deluge valve for maintenance schedule.

Figure 1: Isometric View
7. AVAILABILITY
The Viking TRIMPAC® Model D-1 and D-1B are available through a network of domestic and international distributors. See the Viking Corp. Web site for closest distributor or contact The Viking Corporation.

8. GUARANTEE
For details of warranty, refer to Viking’s current list price schedule or contact Viking directly.

Figure 2: Trimpac® Model D-1 & D-1B Dimensions
### Table 1: Trimpac® System Components
Refer to Figures 3 through 12 for Component Identification.

Note: When viewing this Data Page online, blue text represents hyperlinks and will open the desired data page when clicked.

#### Legend for Figures 3 - 10

- Dotted lines indicate electrical system wiring required but not listed in “System Components” Table. For additional wiring requirements refer to technical data for components used.
- Dashed lines indicate pipe required but not included with TRIMPAC trim packages. Minimum 1/2’ nominal piping recommended.
- Smaller diameter hoses are the (4) included flexible braided stainless steel hoses. Also available as a kit (P/N 12072)
- Larger diameter hose is the included PVC Drain Hose. Also available separately (P/N 12071).
- 1/2" (15 mm) NPT for non-interruptible Alarm Pressure Switch (Optional)
