1. DESCRIPTION

The Viking Double SUREFIRE® Single Interlock Preaction TRIMPAC® Model D-2 and D-2B is designed for use with either a Model E or F Deluge Valve (A.1), a Viking Easy Riser Check Valve (F.1), a PAR-3 or VFR400 Release Control Panel (G.1) and all associated trim piping to form a unique operating system. The system piping is normally dry and pneumatically pressurized to supervise the integrity of the piping, fitting and sprinklers and provide the failsafe operation of the system upon loss of the primary and secondary power supplies. Double Interlock Preaction systems are commonly used in areas subject to freezing and to help minimize accidental water damage.

The Viking SUREFIRE® Double Interlock Preaction TRIMPAC® Model D-2 & D-2B is a factory assembled and tested unit. The enclosure incorporates access doors for the emergency release and alarm test valves and view ports for the prime and water supply pressure gauges. The TRIMPAC® Model D-2 and D-2B eliminates the field assembly of the deluge valve trim and release module piping. The enclosure protects the trim from damage or inadvertent operation. The included stainless steel hoses (or field provided piping) from the deluge valve to the enclosure assembly allows the TRIMPAC® Model D-2 & D-2B to be installed remote from the sprinkler system riser. A valve drain package is required for the deluge valve and is ordered based on the size of the deluge valve. See Figures 14-16 for drain trim charts.

Note: Viking SUREFIRE® Double Interlock Preaction TRIMPAC® D-2 & D-2B is a complete system, and is listed as a unit. As such, it is normally not possible to modify the components of the system or their interrelationship without compromising the listing.

2. LISTINGS AND APPROVALS

- UL® cULus listed - VLTR & VLTR7
- FM Approved - Preaction Sprinkler Systems

3. TECHNICAL DATA

Specifications:
- Rated Water Working Pressure: 250 psi (17.2 bar)
- Gauges: 0-300 PSI (20.7 bar)
- Weight: 55 lbs. (24.9 kg.)
- Dimensions: 16-1/8” (409 mm) high x 29-1/8” (748 mm) wide x 8-25/32” (223 mm) deep
- U.S. Patent Numbers: 6,848,513 & 7,055,612

Material Standards:
- Enclosure: 16 gauge steel, painted red: Epoxy Powder Coat
- Gauges: Brass, 1/4 NPT, Plastic Body
- Solenoid Valves (1 NO, 1 NC): Brass Body ½” (1.27cm), 24 Volt DC, 250 psi (17.2 bar) NEMA Rated 1, 2, 3, 3S, 4 or 4X, 9 Watt
- PORV: Brass Body, 250 PSI (17.2 bar), ½” NPT inlet, ½” NTP drain, ½” NPT sensing side
- Ball Valves: ½” NPT female ends
- Strainer: Brass Body, ½” NPT inlet and outlet, 50 mesh stainless steel screen
- Restricted Orifice: Brass Body, ½” NPT male inlet and outlet, 0.0625” orifice
- Spring Loaded Check Valve: Brass Body, ½” NPT female inlet and outlet
- Drain Check Valve: Brass Body, ½” NPT female inlet and outlet, EPDM clapper rubber
- Hoses (4): Flexible braided stainless steel hoses with steel fittings and connectors, PTFE lined
- Drain Hose (1): PVC Hose 60” long with brass hose connector x 1/2” NPT
- Trim Piping: 1/2” galvanized or 1/2” brass
- Fittings: 1/2” galvanized or 1/2” brass

Ordering Information:
- Part No. - Galvanized 13799D-2
- Part No. - Brass 13799D-2B (Brass available by special order only)
- a. Vertical Mounting Plate Kit - Part No. 11900
- b. Horizontal Mounting Plate Kit - Part No. 11901
- c. Hose Assembly Kit (Includes (4) Stainless Steel Hoses and (1) PVC Drain Hose) - Part No. 12072
- d. Individual 5’-0” Stainless Steel & PTFE Hose: Part No. 16558 (4) (included with Part Nos. 13799D-2 and 13799D-2B)
- e. Individual PVC Hose: P/N 12071 (1) (included with Part Nos. 13799D-2 and 13799D-2B)
- f. Drain Package
  - i. Galvanized - 1-1/2” - 11894-1
  - ii. Brass - 1-1/2” - 11894-5

Form No. F_051704

Replaces page 257a-s, dated January 27, 2012.

(Applied 12072 Hose Assembly Kit.)
4. INSTALLATION

(Refer to Figures 3 - 12 for identification of trim components. Refer to Figure 13 for wall mounting.)

1. TRIMPAC® Model D-2 & D-2B SureFire® Double Interlock Trim Assemblies may be installed with Viking Model E (angle style) or Model F (straight through style) Deluge Valves, sizes 1-1/2", 2", 2-1/2", 3", 4", 6", and 8".

2. The TRIMPAC® Model D-2 & D-2B and valve must be installed in an area not subject to freezing.

3. The TRIMPAC® Model D-2 & D-2B must be installed to facilitate drainage.

4. The TRIMPAC® Model D-2 & D-2B must be installed above the elevation of the drip check valve (C.2).

5. The TRIMPAC® Model D-2 & D-2B can be installed with the hose package or ½” non-corrosive metallic piping. The maximum distance the TRIMPAC® Model D-2 & D-2B may be installed away from the deluge valve is 5'-0".

6. The check valve in the air line must be installed on the riser valve to facilitate drainage.

7. The deluge valve equipped with TRIMPAC® Model D-2 & D-2B must be installed in accordance with Viking Technical Data. The required drain package must be installed in accordance with Figures 14-16.
   a. Remove all plastic thread protectors from the openings of the deluge valve and the TRIMPAC® trim assembly.
   b. Apply a small amount of pipe-joint compound or tape to the external threads of all pipe connections required. Take care not to allow any compound, tape, or other foreign matter inside any of the nipples or openings of the valve or trim components.
   c. Verify that all system components are rated for the water working pressure of the system.

Hydrostatic Test:
The Viking deluge valve is manufactured and listed for use at a maximum Water Working Pressure of 250 PSI (17.2 bar). The valve is factory tested at 500 psi (34.5 bar). The Viking deluge valve may be hydrostatically tested at 300 PSI (20.7 bar) and/or 50 PSI (3.5 bar) above the normal Water Working Pressure, for limited periods of time (2 hours) for the purpose of acceptance by the Authority Having Jurisdiction. If air testing is required, do not exceed 40 psi (2.8 bar) air pressure.

Trim Note: (Refer also to System Data and/or Trim Chart.)
Discharge piping from the auxiliary drain valve (C.1), the flow test valve (C.4), and all system drains should be kept separate. DO NOT connect the outlet of the drip check (C.2) to any other drain.

CAUTION: OPERATION OF VIKING DELUGE VALVE BY PRESSURIZING THE PRIMING CHAMBER WITH AIR PRESSURE OR ANY OTHER PRESSURIZED GAS IS NOT RECOMMENDED OR APPROVED.

8. Placing the System in Service: (Refer to Figures 3 - 12.)

NOTE: REFER TO PAR-3 OR VFR400 OWNER’S MANUAL, AND INSTRUCTIONS PROVIDED IN TECHNICAL DATA DESCRIBING THE VIKING DELUGE VALVE AND OTHER SYSTEM COMPONENTS.

a. Verify that the PAR-3 or VFR400 Control Panel (G.1), Detector Circuits and Detectors have been properly installed and energized according to instructions provided in Viking Technical Data and the release control panel Owner’s Manual.

b. Verify that the system has been properly drained. (When plunger is depressed on drip check (C.2), no water should flow.) System Drain should be open. Verify that Emergency Release (B.1) is closed. Note: Emergency release (B.1) is closed when the handle is In-Line with the pipe. This allows the door to close when the valve is in the normal position.

c. Verify that the System Main Water Supply Control Valve (E.1) is closed and the Deluge Valve (A.1) is trimmed according to Figures 3 through 12.

d. Verify that the system water supply piping is pressurized up to the closed System Main Water Supply Control Valve (E.1) and the priming line is pressurized up to the closed Priming Valve (B.2).

e. Establish a normal condition on the the PAR-3 or VFR Control Panel (G.1): Open panel and press “RESET”. Release Solenoid Valve (B.14) should close. Flow from Release Solenoid Valve (B.14) to Drain Cup (C.3) should stop.

f. Establish system air pressure. Make sure Supervisory Air Switch (B.18) is set to proper activation pressure.

h. Open Flow Test Valve (C.4).

i. Partially open Main Water Supply Control Valve (E.1) (if closed).

j. When full flow develops from Flow Test Valve (C.4), close the Flow Test Valve. Verify that there is no flow from open Auxiliary Drain (C.1).

k. Close Auxiliary Drain (C.1).

l. Fully open and secure the Main Water Supply Control Valve (E.1).

m. Verify that the Alarm Shut-off Valve (B.10) is open and that all other valves are in their normal operating position.

n. Depress the plunger of the Drip Check (C.2). No water should flow from the Drip Check when the plunger is pushed.
5. OPERATION

(Refer to Figures 3 - 12.)

In the SET condition:

System water supply pressure enters the priming chamber of the Deluge Valve (A.1) through the 1/4" (8 mm) hose and 1/2" priming line which includes a normally open priming valve (B.2), strainer (B.3), restricted orifice (B.4) and check valve (B.5). In the SET condition, water supply pressure is trapped in the priming chamber by check valve (B.5), normally closed Emergency Release (B.1), Pneumatic Actuator (B.12), Pressure Operated Relief Valve (PORV) (B.11) and normally closed Release Solenoid Valve (B.14). Water Supply pressure in the priming chamber holds the clapper of the Deluge Valve (A.1) on the seat due to the differential design of the valve pressure. The clapper separates the inlet chamber from the outlet chamber, keeping the outlet chamber and system piping dry.

In Fire Conditions:

When the detection system (G.2) operates, the PAR-3 or VFR400 Control Panel (G.1) activates the system alarm and initiates the appropriate detection alarms. No water enters the system piping at this time. When a sprinkler operates, as caused by the heat of a fire, system supervisory air is lost, and the Low Air Pressure Switch (B.18) is activated. Only after both indicating circuits have operated, the PAR-3 or VFR-400 Release Control Panel (G.1) energizes normally closed Release Solenoid Valve (B.14) open and normally open Release Solenoid Valve (B.17) closed. Pressure is released from the priming chamber faster than it is supplied through restricted orifice (B.4). The Deluge Valve (A.1) clapper opens to allow water flow into the system piping and to alarm devices. Water entering the system piping increases pressure on the PORV (B.11), which vents off the water supply to the priming chamber. Water will flow from any open sprinklers or nozzles.

To return the system to “Normal” conditions, drain the system piping and replace any sprinklers that may have operated. Replace any detectors which have been damaged. Re-establish system air pressure by following the steps in section 4. INSTALLATION, Step 8 Placing the System in Service.

Panel Trouble, Loss of Power Prior to Operation or Pipe Damage Conditions: During Normal Power Supply Conditions, faults or complete loss of power.

During normal power conditions if the system piping and/or the sprinklers are damaged, the low pressure supervisory switch (B.18) will activate a supervisory alarm at the PAR-3 or VFR400 Control Panel (G.1) and the normally open solenoid valve (B.17) will be powered closed to prevent the deluge valve from opening.

In the event of a fire during a fault on the input circuit wiring, loss of primary AC power or complete loss of all power, the deluge valve will open allowing water flow if the following conditions occur:

1. The initiating devices (G.2) activate causing the PAR-3 or VFR400 Release Control Panel (G.1) to enter an alarm and release condition. The normally closed solenoid (E.14) will open allowing water pressure to be relieved from the priming chamber of the deluge valve (A.1). With pressure relieved from the priming chamber, the deluge valve will open and allow water flow. Water will not be discharged into the protected area until a sprinkler head operates.

2. During a fault condition on the input wiring which caused a trouble alarm on the PAR-3 or VFR400 Release Control Panel (G.1) or a complete loss of normal AC power and standby battery backup power, the normally open solenoid (B.17) is prevented from operating. During this condition, activation of a sprinkler head will allow a pneumatic release of the deluge valve (A.1). Water pressure will be relieved from the priming chamber, the deluge valve (A.1) will open and allow water to flow.

Loss of Power During Operation:

If all power fails while the system is flowing water, the normally open Release Solenoid (B.17) will open and the normally closed Release Solenoid (B.14) will remain closed. The PORV (B.11) is already pressurized open to prevent pressure in the chamber from building up. Water from main supply will continue entering the system, and through any open sprinkler(s).

6. INSPECTIONS, TESTS AND MAINTENANCE

It is imperative that the system be inspected and tested on a regular basis. The frequency of the inspections may vary due to contaminated water supplies, corrosive water supplies, or corrosive atmospheres. Also, the alarm devices, detection systems, or other connected trim may require a more frequent schedule. For minimum maintenance and inspection requirements, refer to NFPA 25. In addition, the Authority Having Jurisdiction may have additional maintenance, testing, and inspection requirements that must be followed. Refer to the specific Viking deluge valve data page for periodic testing.

Maintenance:

TRIM PAC® Model D-2 should be inspected, tested, and maintained in accordance with the latest edition of NFPA 25, The Standard for Inspection, Testing, and Maintenance of water based fire protection systems, and in accordance with the Authority Having Jurisdiction.

NOTICE: THE OWNER IS RESPONSIBLE FOR MAINTAINING THE FIRE PROTECTION SYSTEM AND DEVICES IN PROPER OPERATING CONDITION. THE DELUGE VALVE MUST BE KEPT FROM FREEZING CONDITIONS AND PHYSICAL DAMAGE THAT COULD IMPAIR ITS OPERATION. WHERE DIFFICULTY IN PERFORMANCE IS EXPERIENCED, THE VALVE MANUFACTURER OR AUTHORIZED REPRESENTATIVE SHALL BE CONTACTED IF ANY FIELD ADJUSTMENT IS TO BE MADE.
After Each Operation:

1. Sprinkler systems that have been subjected to a fire must be returned to service as soon as possible. The entire system must be inspected for damage, and repaired or replaced as necessary.
2. Deluge valves and TRIMPAC® Model D-2 that have been subjected to brackish water, salt water, foam, foam/water solution, or any other corrosive water supply should be flushed with good quality fresh water before being returned to service. Refer to specific deluge valve for a maintenance schedule.
7. AVAILABILITY
The Viking TRIMPAC® Model D-2 is available through a network of domestic and international distributors. See the Viking Corp. Web site for closest distributor or contact The Viking Corporation.

8. GUARANTEE
For details of warranty, refer to Viking’s current list price schedule or contact Viking directly.
