1. DESCRIPTION
(Refer to Figures 1-4)
Viking Deluge Systems utilize a Viking Deluge Valve to control the water supply to system piping equipped with open sprinklers and/or spray nozzles. The system piping remains empty until the deluge valve is activated by operation of the release system. Deluge systems are commonly used where it is desirable to simultaneously spray water from all open sprinklers and/or nozzles on the system when it operates. Electrically controlled deluge systems require an electric solenoid valve controlled by an approved system control Panel with compatible detection system.

In fire conditions, when the detection system operates, the system control panel energizes solenoid valve open, causing the deluge valve to open and allowing water to enter the system piping. Water will flow from any open sprinklers and/or spray nozzles on the system.

2. LISTINGS AND APPROVALS
FM Approved - The Viking electrically controlled Deluge System is FM Approved when installed with specific components. Refer to current FM Approval Guide. Consult the manufacturer for any component approvals too recent to appear in the FM Approval Guide.

3. SYSTEM OPERATION
(Refer to Figures 1-4)
A. IN THE SET CONDITION
System water supply pressure enters the priming chamber of the deluge valve through the 1/4” (6.4 mm) priming line, which includes a normally open priming valve (B.1), strainer (B.2), restricted orifice (B.3) and Check Valve (B.4) and the normally closed PORV (B.10). In the SET condition, water supply pressure is trapped in the Priming Chamber by Check Valve (B.4) and normally closed Solenoid Valve (E.1). The pressure in the Priming Chamber holds the Deluge Valve clapper closed, keeping the outlet chamber and system piping dry.

B. IN FIRE CONDITIONS
When the detection system (E.4) operates, the System Control Panel (E.3) activates an alarm and energizes the normally closed Solenoid Valve (E.1) open. Pressure is released from the priming chamber faster than it is supplied through restricted orifice (B.3) (B.3). The Deluge Valve clapper opens to allow water to flow into the system piping and alarm devices, causing the water motor alarm (C.2) and water flow alarms connected to the alarm pressure switch (C.1) to activate. Water will flow from any open sprinklers and/or spray nozzles on the system.

C. FOR DELUGE VALVE TRIM
(Refer to Figures 1-4)
When the Deluge Valve operates, the air side of the PORV (B.10) loses pressure, causing the PORV (B.10) to operate. When the PORV (B.10) operates, it continually vents the priming chamber to prevent the Deluge Valve (A.1) from resetting even if the open releasing devices close. The Deluge Valve (A.1) can only be reset after the system is taken out of service, and the outlet chamber of the deluge valve and associated trim piping are de-pressurized and drained.

D. TROUBLE CONDITIONS
If the detection system operates due to mechanical damage or malfunction, the Deluge Valve will open. Water will flow from any open sprinklers and/or spray nozzles on the system. Water motor alarm (C.2) and alarms connected to alarm pressure switch (C.1) will activate.

E. MANUAL OPERATION
Anytime the handle inside emergency release (B.11) is pulled, pressure is released from the priming chamber and the deluge valve (A.1) will open. Water will flow into the system piping and alarm devices. Water will flow from any open sprinklers and/or spray nozzles on the system.

4. INSTALLATION
Refer to current Viking Technical Data describing individual components of the Viking Deluge System. Technical Data describing the Viking Deluge Valve and other system components are packed with product and in the Viking Engineering and Design Data book. Also, refer to applicable installation standards, codes, and Authorities Having Jurisdiction.

1. The deluge valve (A.1) and trim must be installed only in areas where they will not be subjected to freezing temperatures.
2. Alarm pressure switch (C.1) should activate when pressurized to 4 to 8 PSI (.3 to .6 bar) on pressure rise. Alarm pressure switch (C.1) should be wired to activate the waterflow alarm.
3. All initiating devices (detectors) (E.4), indicating appliances, releasing devices(E.1), and the system control panel (E.3) must be compatible and approved for use with the deluge system that is used. Refer to appropriate Fire Protection Equipment Approval Guides and current Viking Technical Data describing individual components of the Viking Deluge System that is used.
5. PLACING THE SYSTEM IN SERVICE

(Refer to Figures 1-4)

NOTE: FOR NEW INSTALLATIONS, REFER TO INSTRUCTIONS PROVIDED IN TECHNICAL DATA DESCRIBING THE VIKING DELUGE VALVE AND OTHER SYSTEM COMPONENTS. (SEE SECTION 8.)

To Return a System to Service:

1. Verify that the system has been properly drained. Auxiliary drain (B.6) should be open. Verify that the emergency release (B.11) is closed.
2. Open the priming valve (B.1).
3. Reset the system control panel. For Viking Model VFR400 Panel, open the panel and press “RESET”. Solenoid valve (E.1) should close. Flow from the solenoid valve (E.1) to the drain cup should stop.
4. Open the flow test valve (B.15).
5. Partially open the main water supply control valve (D.1).
6. When full flow develops from the flow test valve (B.15), close the flow test valve (B.15). Verify that there is no flow from the open auxiliary drain (B.6).
7. Close the auxiliary drain (B.6).
8. Fully open and secure the main water supply control valve (D.1).
9. Verify that the alarm shut-off valve (B.9) is open and that all other valves are in their normal operating position.
10. Depress the plunger of the drip check valve (B.7). No water should flow from the drip check valve (B.7) when the plunger is pushed.

6. EMERGENCY INSTRUCTIONS

(Refer to Figures 1-4)

To Take System Out of Service:

WARNING: PLACING A CONTROL VALVE OR DETECTION SYSTEM OUT OF SERVICE MAY ELIMINATE THE FIRE PROTECTION CAPABILITIES OF THE SYSTEM. PRIOR TO PROCEEDING, NOTIFY ALL AUTHORITIES HAVING JURISDICTION. CONSIDERATION SHOULD BE GIVEN TO EMPLOYMENT OF A FIRE PATROL IN THE AFFECTED AREAS.

After a fire, verify that the fire is OUT and that placing the system out of service has been authorized by the appropriate Authority Having Jurisdiction.

1. Close the water supply control valve (D.1).
2. Open the auxiliary drain (B.6).
   a. To silence electric alarms controlled by Viking Model VFR400 Release Control Panel, open panel, and press “ALARM SILENCE”.
   b. To silence electric alarms controlled by the pressure switch (C.1) and to silence the water motor alarm (C.2), close the alarm shut-off valve (B.9).

NOTE: ELECTRIC ALARMS CONTROLLED BY A PRESSURE SWITCH INSTALLED IN THE ½” (15 MM) NPT CONNECTION FOR A NON-INTERRUPTIBLE ALARM PRESSURE SWITCH CANNOT BE SHUT OFF UNTIL THE DELUGE VALVE IS RESET OR TAKEN OUT OF SERVICE.

NOTE: SPRINKLER SYSTEMS THAT HAVE BEEN SUBJECTED TO A FIRE MUST BE RETURNED TO SERVICE AS SOON AS POSSIBLE. THE ENTIRE SYSTEM MUST BE INSPECTED FOR DAMAGE, AND REPAIRED OR REPLACED AS NECESSARY.

4. Close the priming valve (B.1) (optional). Sprinkler systems that have been subjected to a fire must be returned to service as soon as possible. The entire system must be inspected for damage, and repaired or replaced as necessary.
5. Replace any detectors (E.4) that have been damaged.
6. Replace any sprinklers and/or spray nozzles that have been damaged or have been exposed to fire conditions.
7. Perform all maintenance procedures recommended in Technical Data describing individual components of the system that has operated.
8. Return the system to service as soon as possible. Refer to section 5. PLACING THE SYSTEM IN SERVICE.
7. INSPECTIONS AND TESTS

NOTICE: THE OWNER IS RESPONSIBLE FOR MAINTAINING THE FIRE PROTECTION SYSTEM AND DEVICES IN PROPER OPERATING CONDITION.

It is imperative that the system be inspected and tested on a regular basis in accordance with NFPA 25. Refer to INSPECTIONS and TESTS recommended in current Viking Technical Data describing individual components of the Viking Deluge System used. (See section 8 for hyperlinks to Viking Technical Data.)

The frequency of the inspections may vary due to contaminated water supplies, corrosive water supplies, corrosive atmospheres, as well as the condition of the air supply to the system. For minimum maintenance and inspection requirements, refer to NFPA 25. In addition, the Authority Having Jurisdiction may have additional maintenance, testing, and inspection requirements that must be followed.

WARNING: Any system maintenance that involves placing a control valve or detection system out of service may eliminate the fire protection capabilities of that system. Prior to proceeding, notify all Authorities Having Jurisdiction. Consideration should be given to employment of a fire patrol in the affected areas.

8. ORDERING INSTRUCTIONS

To order a complete Electric release Deluge system, the following components must be purchased: Deluge Valve, Conventional Trim, and a Release Trim package.
